The sites are Changshu (CS), Danyang (DY), Fengqiu with rice paddy fields (FQP), Shenzhen (SZ), and Yingtian (YTA). T_{\max} , T_{\min} , P , W , R_{\max} , M , R_{ave} and RH denote the maximum and minimum daily air temperature ($^{\circ}\text{C}$), daily precipitation (cm d^{-1}), wind speed (m s^{-1}), maximum daily solar radiation (W m^{-2}), the moment of R_{\max} appearing (M , hour), average daily solar radiation (W m^{-2}), and average daily relative humidity (%), respectively. The bold texts indicate the exact period(s) with daily observations of ammonia fluxes at each field site. W^* is for the simulation of P11, P13, P15 and P17 at Shenzhen. $W^{\#}$ is for the simulation of P12, P14, P16 and P18 at Shenzhen. The definitions of the case codes are referred to Table 3. For R_{\max} and M with [@] are lack of measurement, and thus R_{\max} is arbitrarily set by referring to the average of the R_{\max} value of the day before and after; M is arbitrarily set at 12:00 o'clock this study.
