

Figure S1. Time series of temperature measurements recorded by Abisko SMHI (Sveriges meteorologiska och hydrologiska institut) at ANS (Abisko Naturvetenskapliga Station), 10 km to the east of Stordalen Mire, with years 2014-2016 indicated with orange circles.

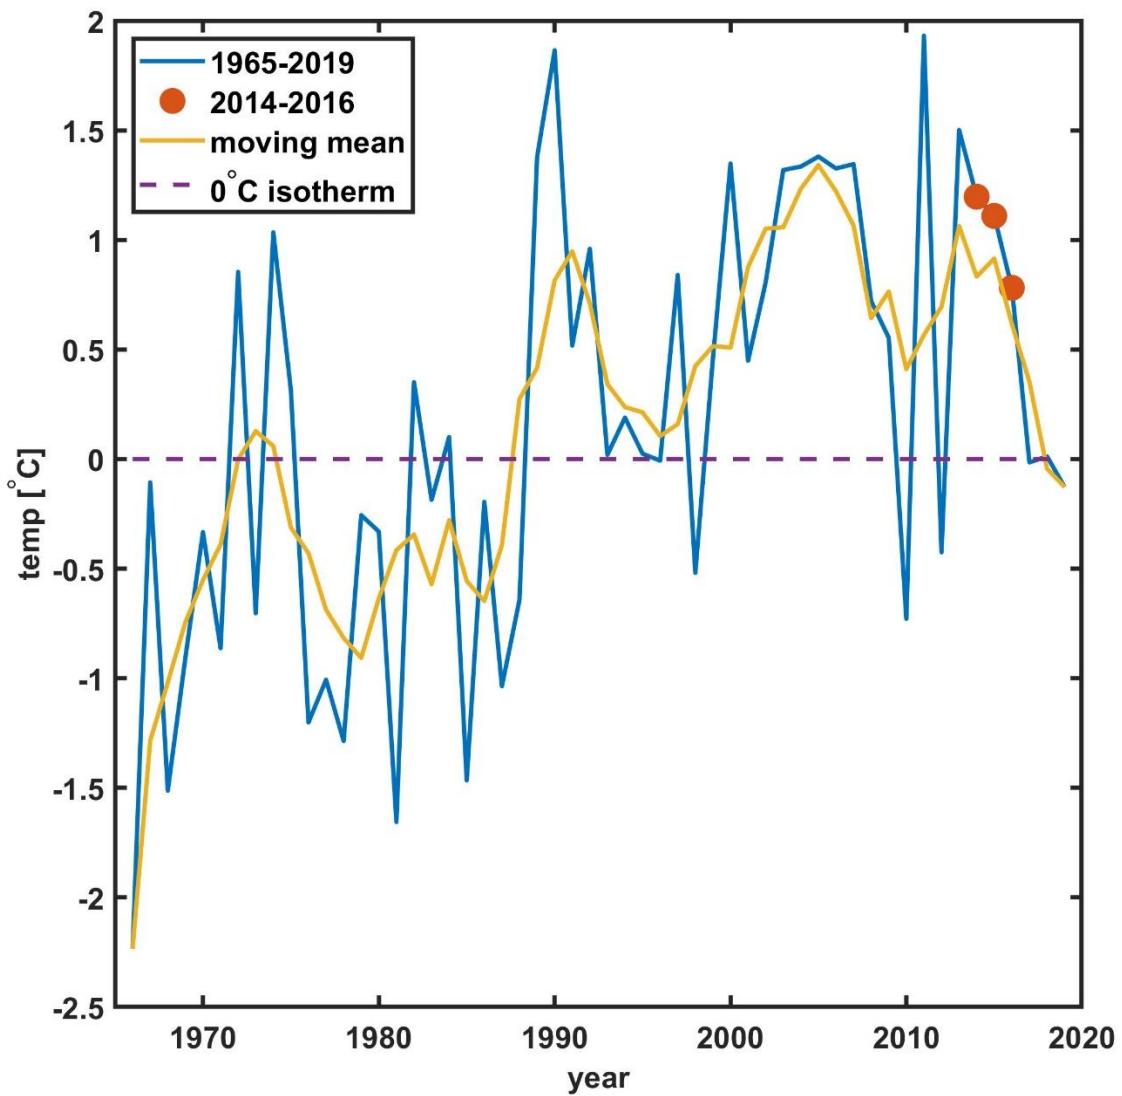

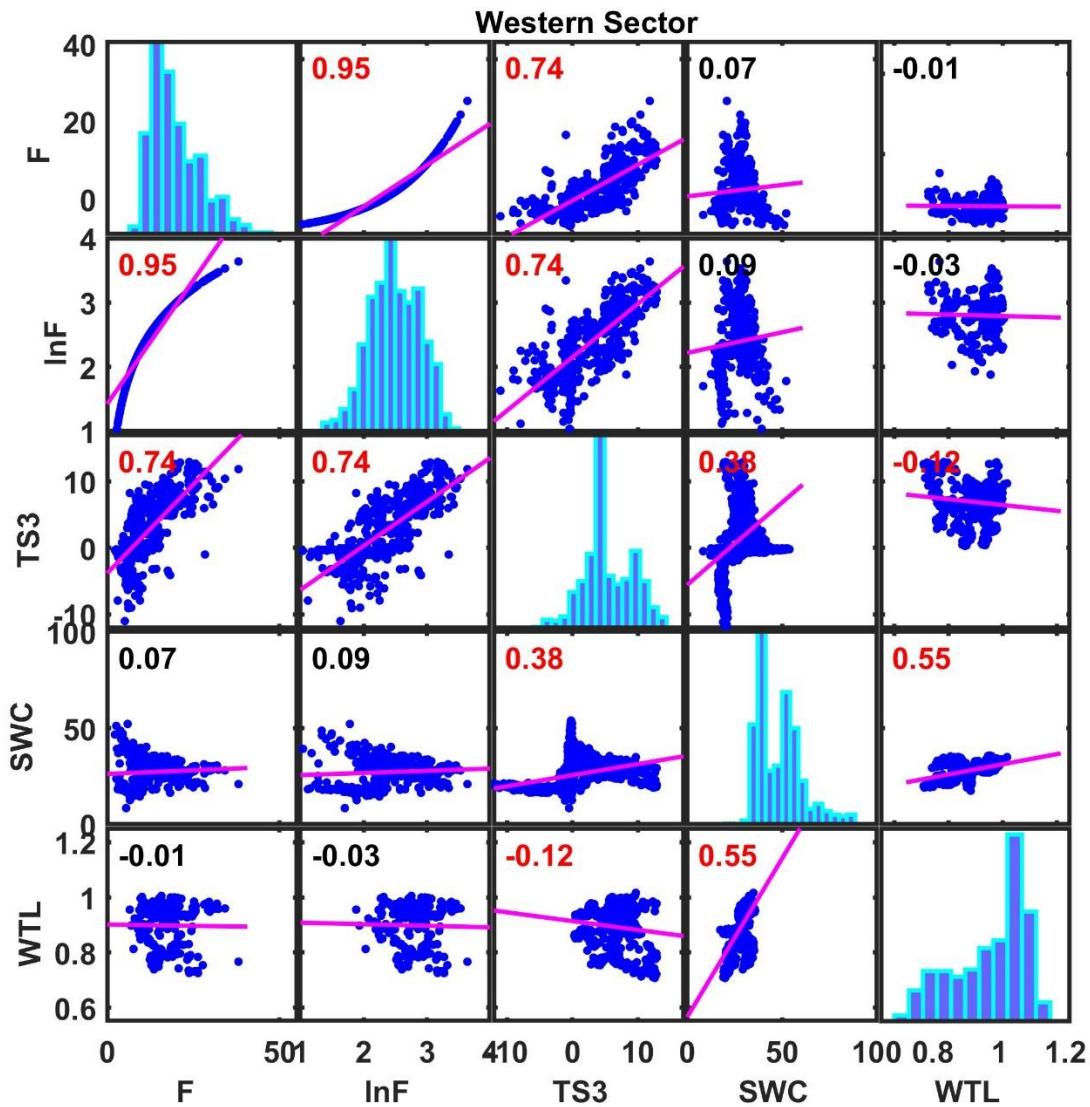

Figure S2. Correlation matrix for daily averages of methane fluxes (F), its logarithm (lnF), and chosen environmental variables (soil temperature at 10 cm (TS3), 30 cm (TS4), soil water content (SWC), and water table level (WTL)) for the western sector (top panel) and eastern sector (bottom panel) for years 2014-2016. The number in the top corner of each subplot is  $R^2$ . The red color for this number shows a significant correlation. The black color of this number shows that the correlation is not significant.

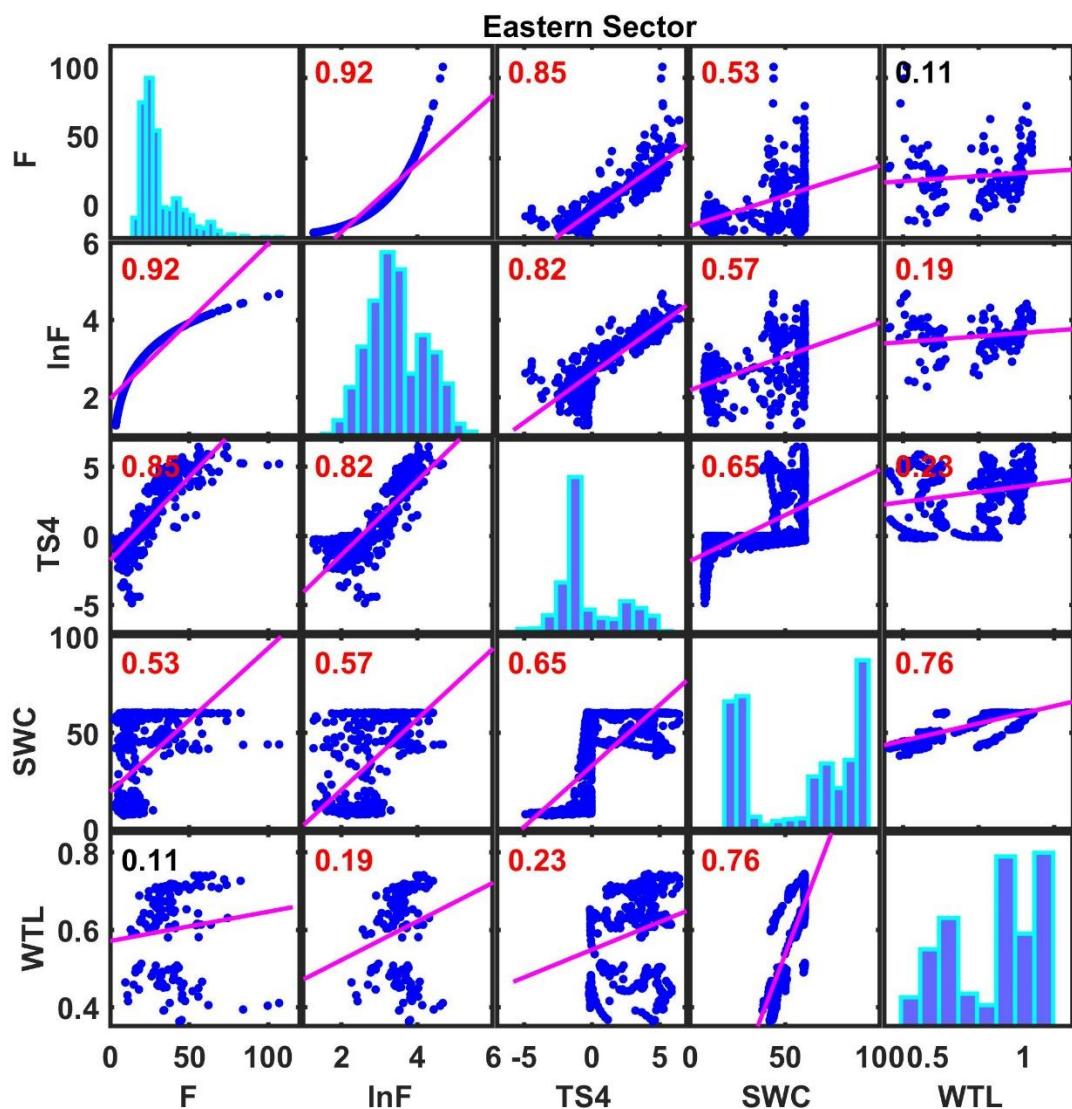

Figure S3. Monthly average of peat temperature for each layer for the western and eastern sector for years 2014-2016

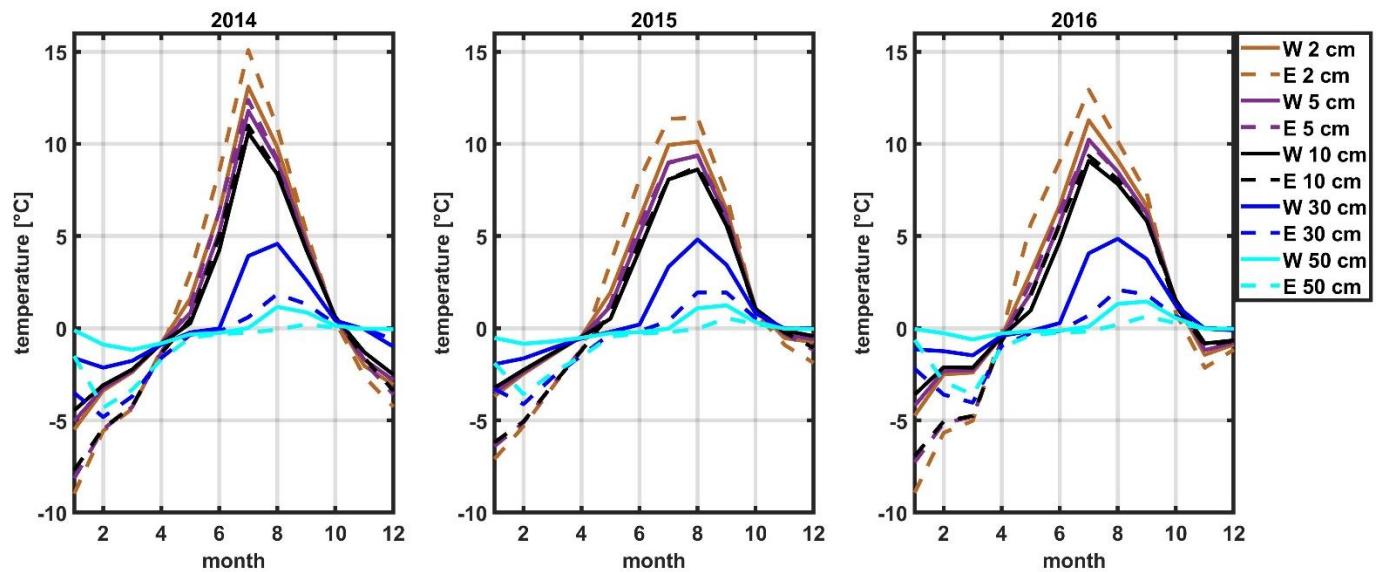

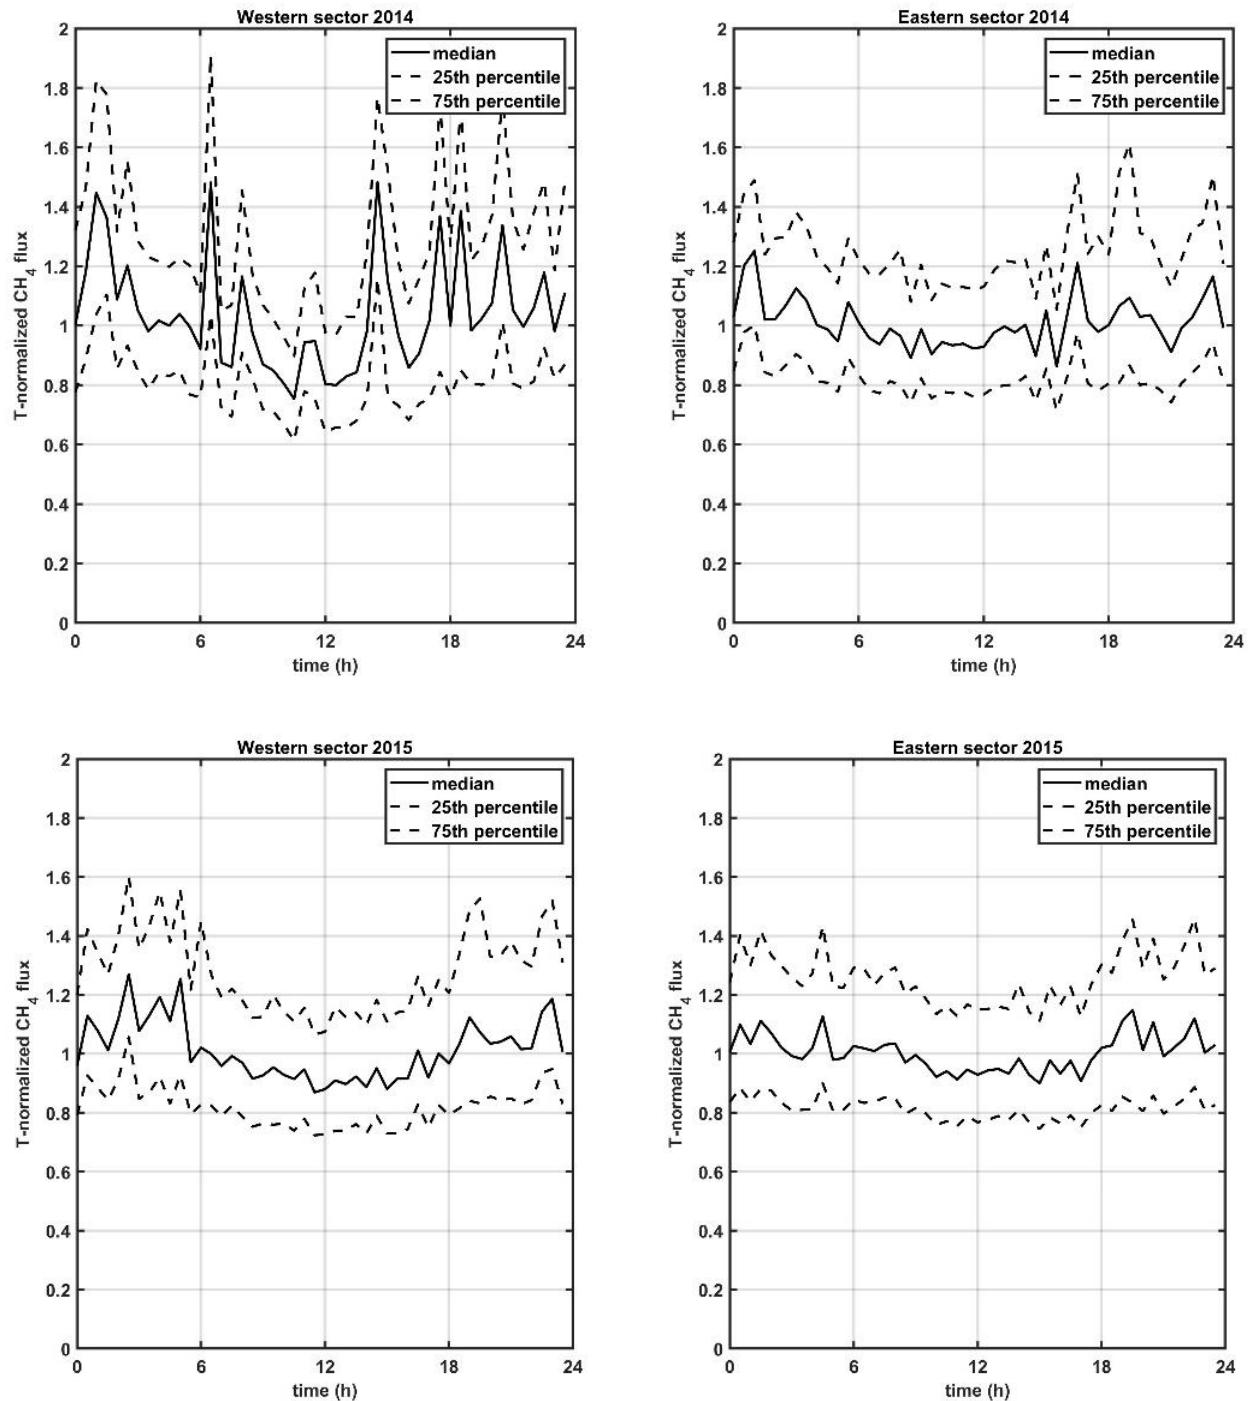

Figure S4. The diel cycle of CH<sub>4</sub> fluxes for the western and eastern sector for years 2014-2016

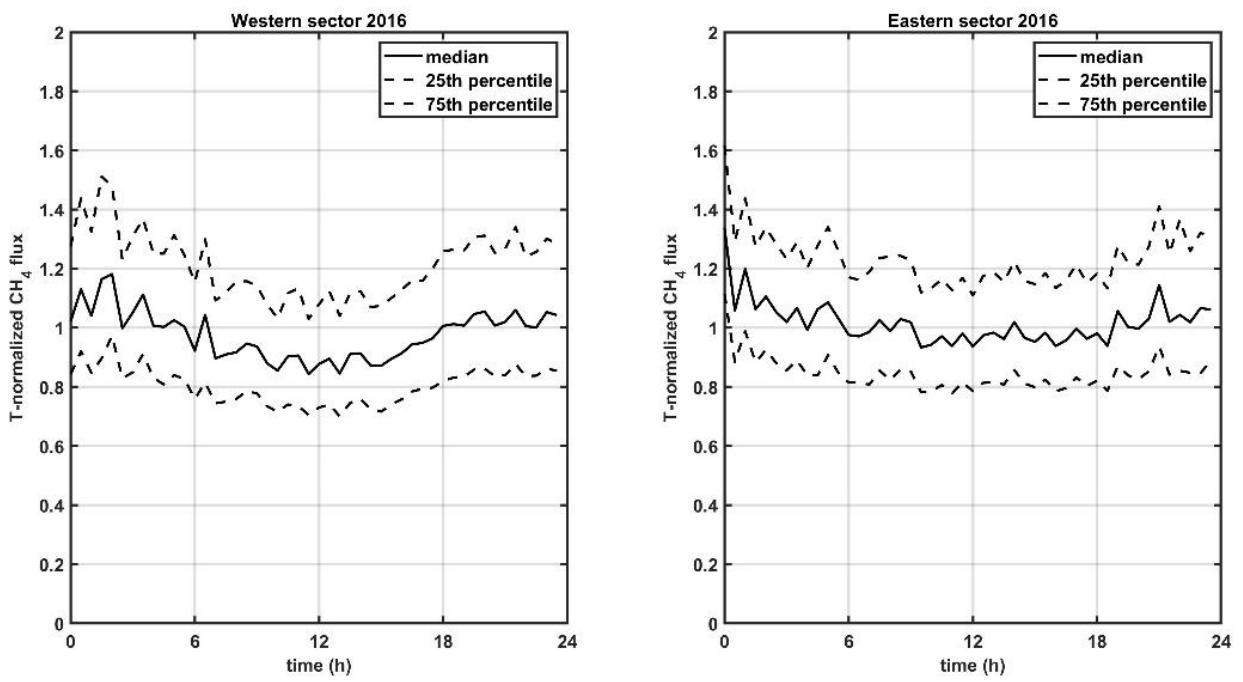

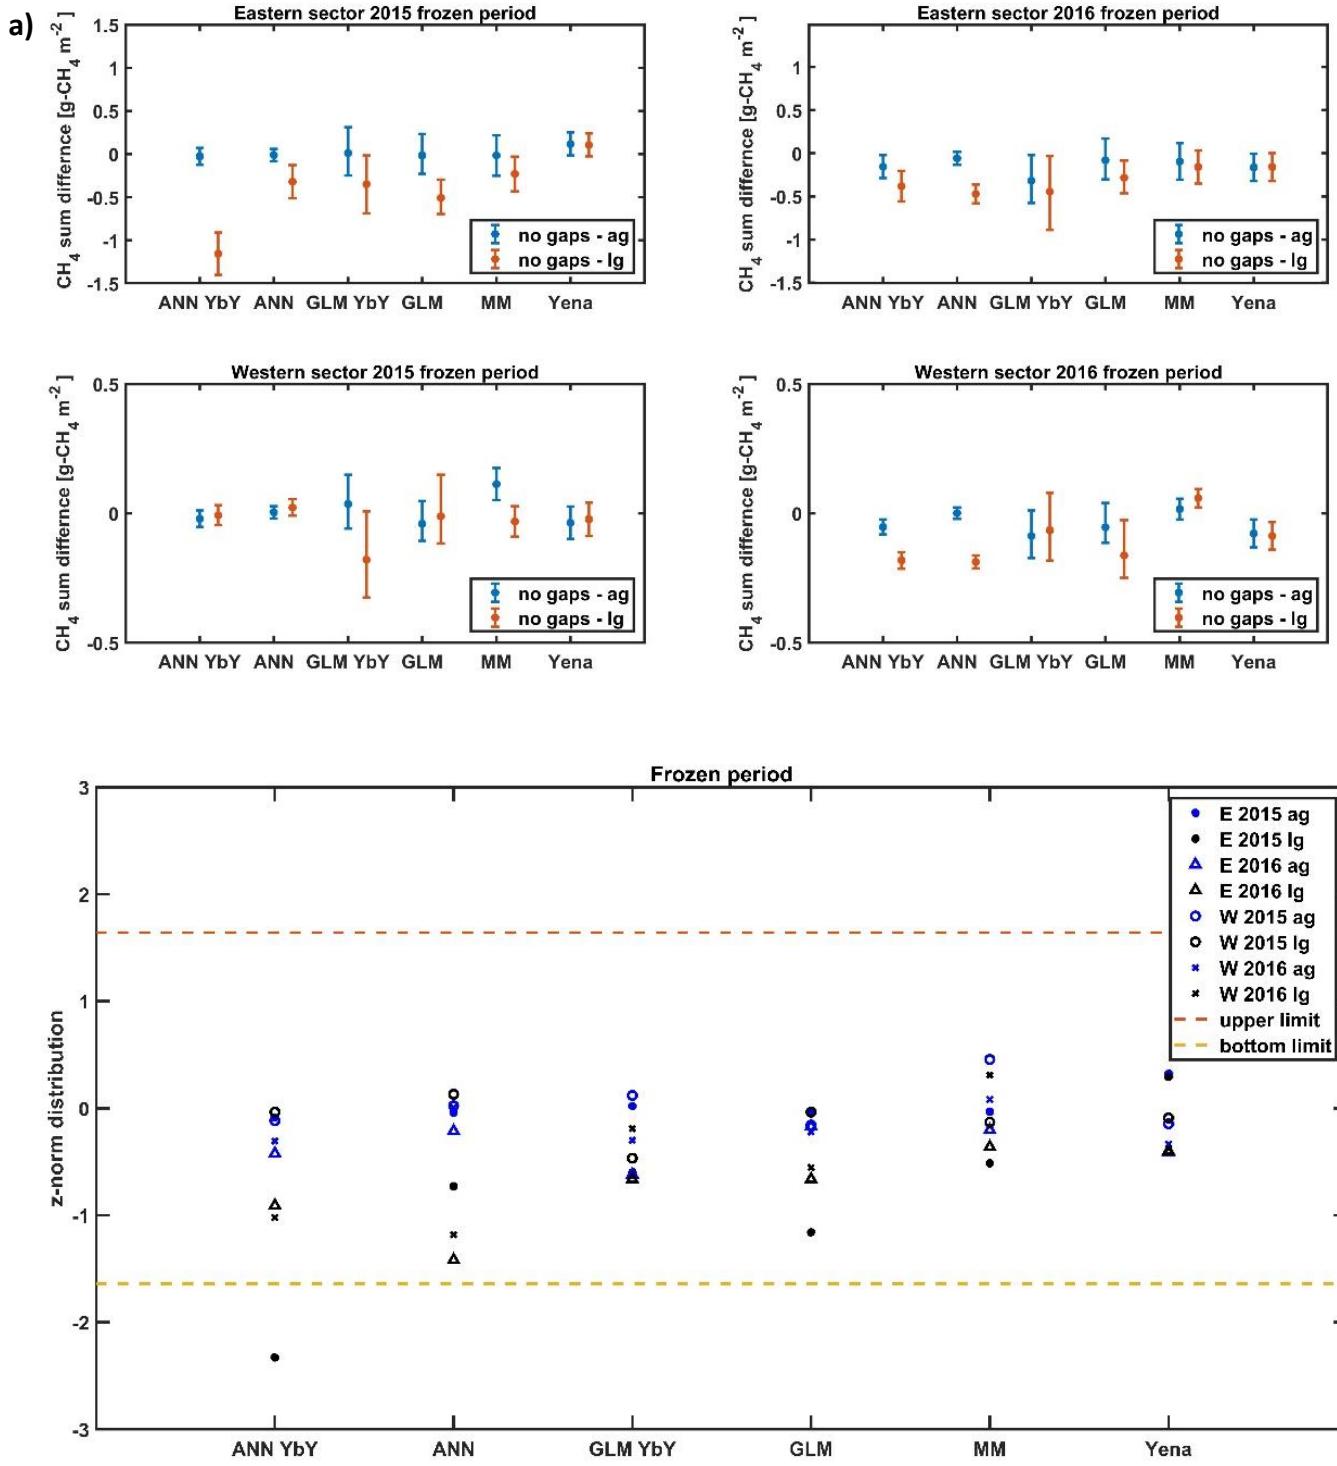

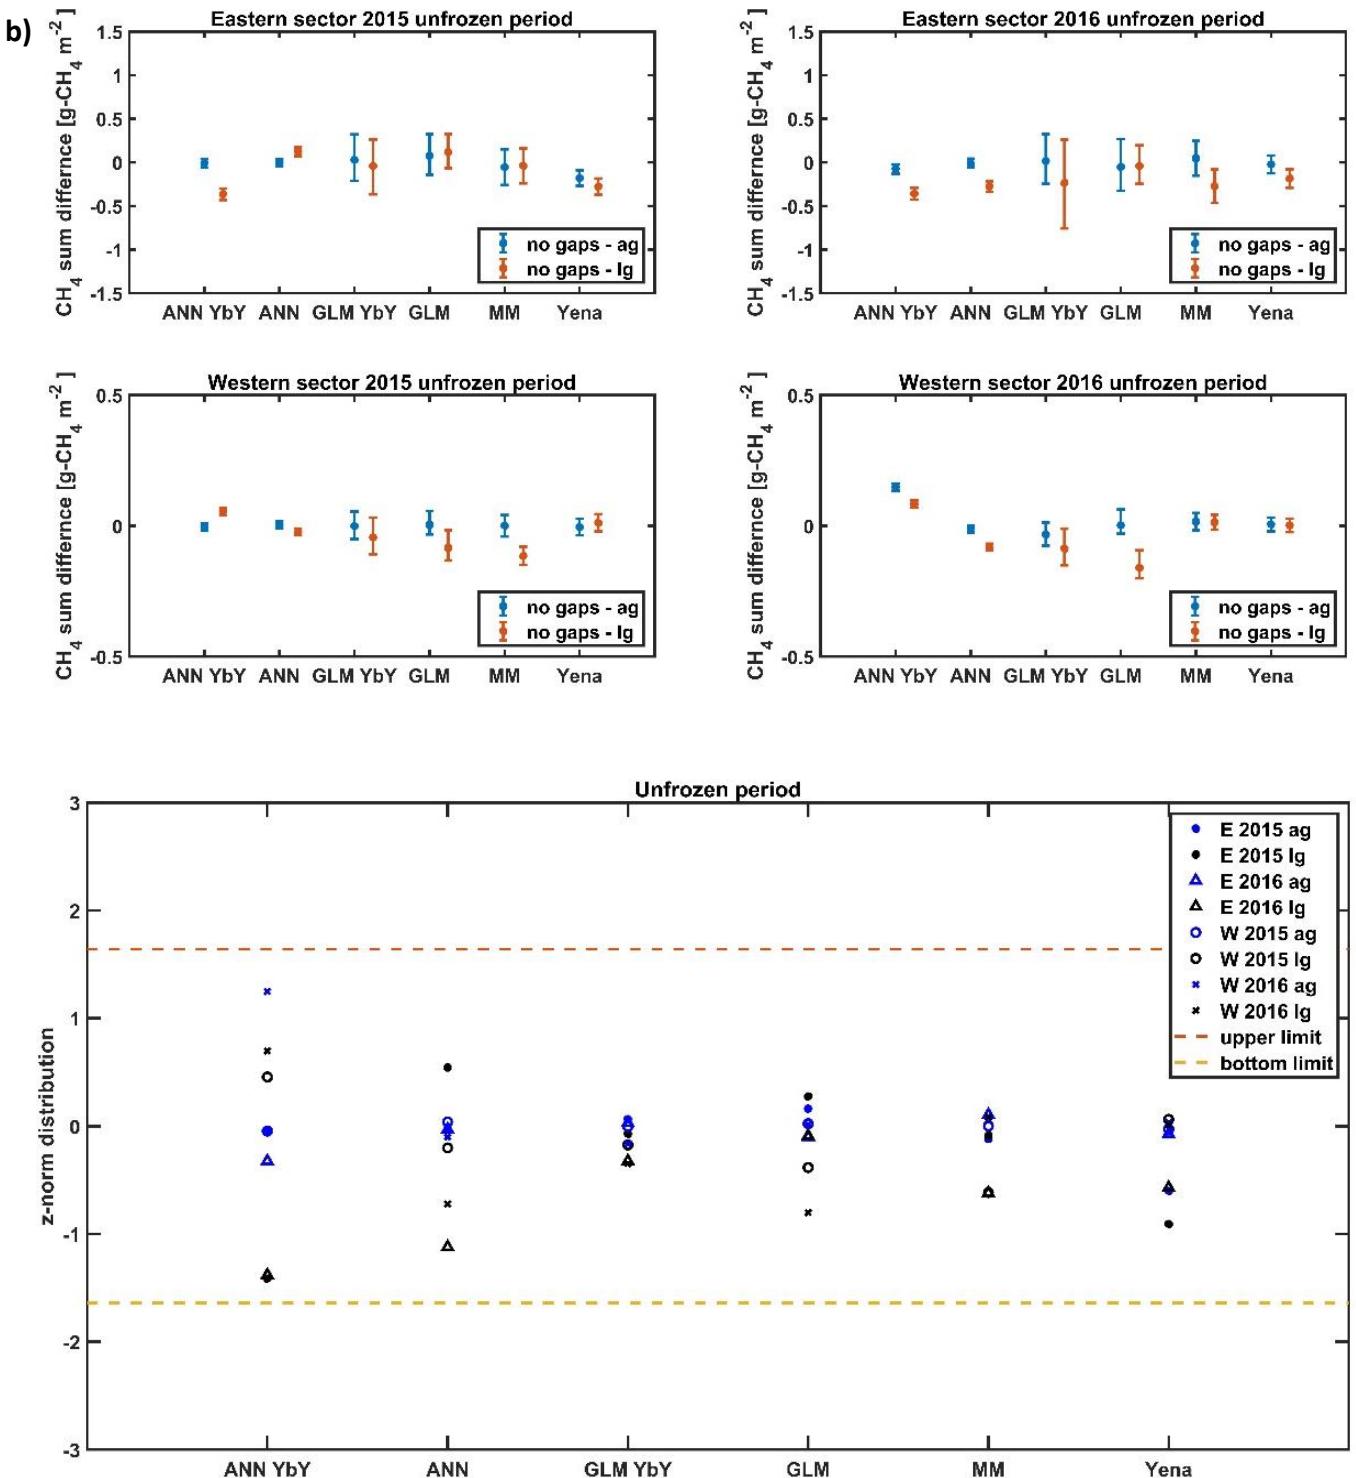

Figure S5. Differences for a) frozen b) unfrozen and c) whole period between the estimation of annual sums of CH<sub>4</sub> fluxes for models with and without artificial gaps with the length of 35-days and 80-days (Panels 1-4). Panel 5 shows a test if these differences are significant. ANN - the artificial neural network for all years, ANN YbY - artificial neural network each year separately, Jena - Jena online gap-filling tool, MM - moving mean with 5-day moving window, GLM- the general linear model for all years, GLM YbY - the general linear model for each year separately. The shaded light blue area is frozen period (see chapter 2.8). Ag- gaps of 35-days length and Lg – gaps of 80-days length.

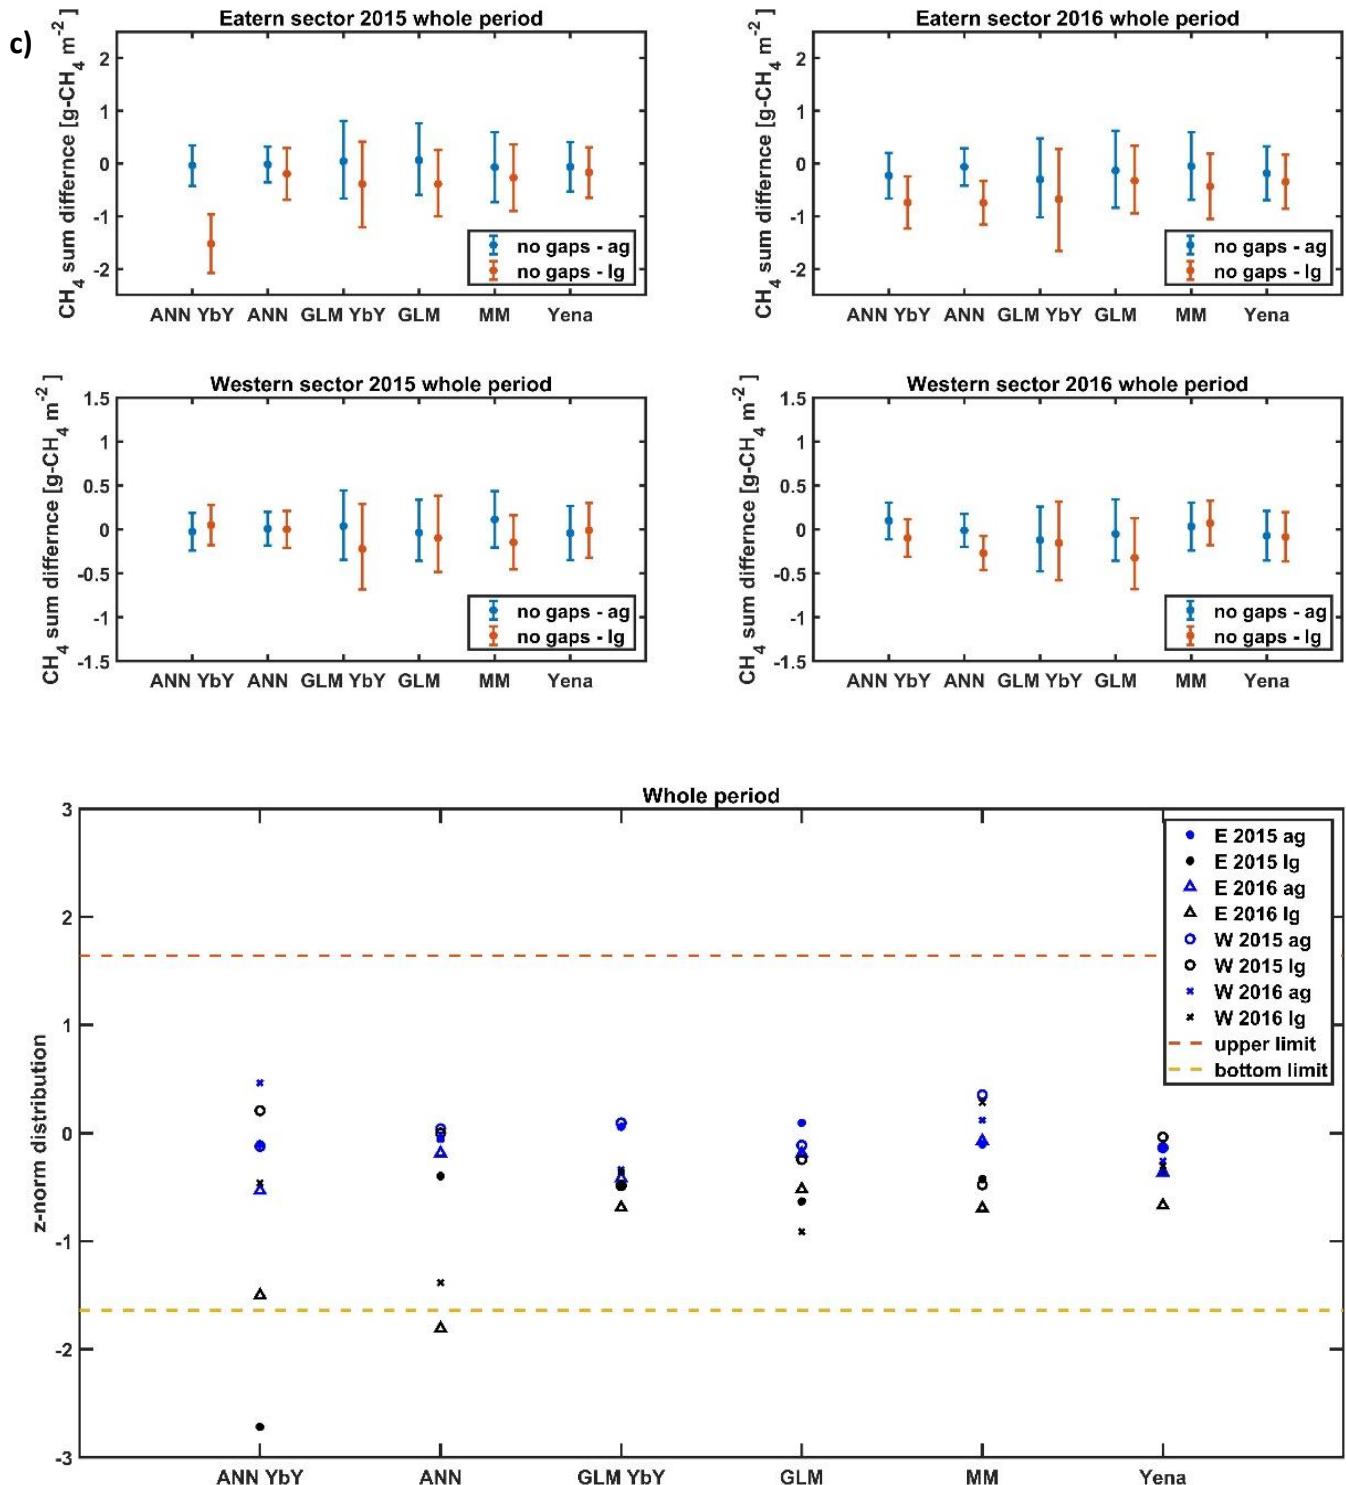

Table S1. Ancillary measurements at SE-Sto

| Measured variable   | Measurement height                | Sensor type  | Parameters type |
|---|-----------------------------------|--|-----------------|
|   | (m a.g.l.)                        |  |                 |
| peat temperature at 5 levels                                      | -0.02, -0.05, -0.10, -0.30, -0.50 | Campbell Thermocouple, Type E (chromel-constantan) | Peat/soil       |
| soil heat flux  | -0.05                             | Hukseflux HFP01SC                                  |                 |
| volumetric soil water content (SWC)                               | 0.00 to -0.06                     | Delta-T ML2x, vertical                             |                 |
| ground water level (WTL)  | 0                                 | Campbell CS450                                     |                 |
| incoming shortwave radiation, pyranometer                         | 4.71                              | Kipp&Zonen CMP21                                   |                 |
