Figure S1–S3

Introduction

- 5 This document contains: Figure S1, Relationship between mean drainage slope, mean drainage elevation, and annual air temperature in the Yinjiang (Y), Shiqian (S), and Yuqing (Q) catchments; Figure S2, Land use pattern impacts on DOM character. (a) SUVA₂₅₄ (in L mg⁻¹ m⁻¹) and (b) freshness index (β/α) decreased with increasing proportion of urban and agricultural land use area in the studied catchments. Outlier (site S3) was excluded from analyses in panel a as the sample was strongly influenced by the road construction, which was evidenced by high POC and TSM concentration (Chen et al.,
- 10
 - 2021). (c) Humification index (HIX) positively related to the increasing proportion of urban and agricultural land use area. Figure S3, Relationship between freshness index (β/α) and EEM-PARAFAC components (C2) in the Yinjiang (Y), Shiqian (S), and Yuqing (Q) catchments. Components are presented as % of the total components.
