Table S2. Model parameters used in JSBACH

Parameters	Sites			
	KMP lawn	VKI lawn	KMP meadow	VKI meadow
root depth	0.12	0.12	0.20	0.18
field capacity	0.14	0.05	0.11	0.05
wilting point	0.34	0.25	0.33	0.21
max LAI	2.2	1.6	4.1	1.1
fcrit	0.9	0.9	0.8	0.9
fwilt	0.33	0.2	0.28	0.28

25

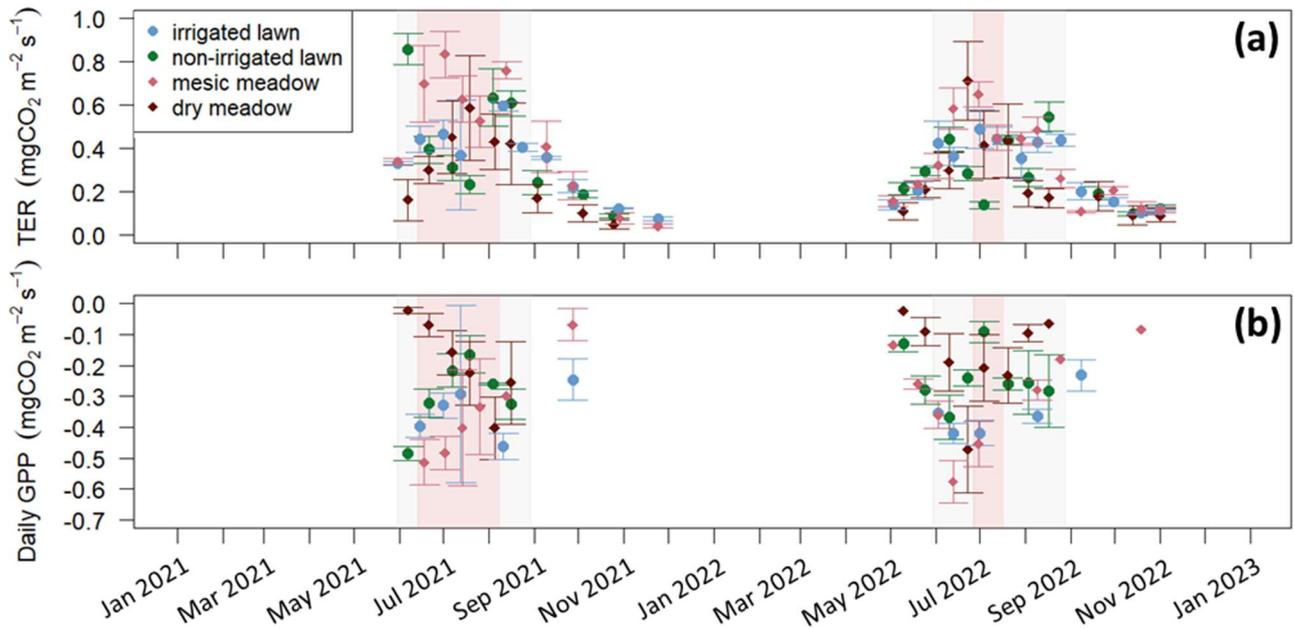

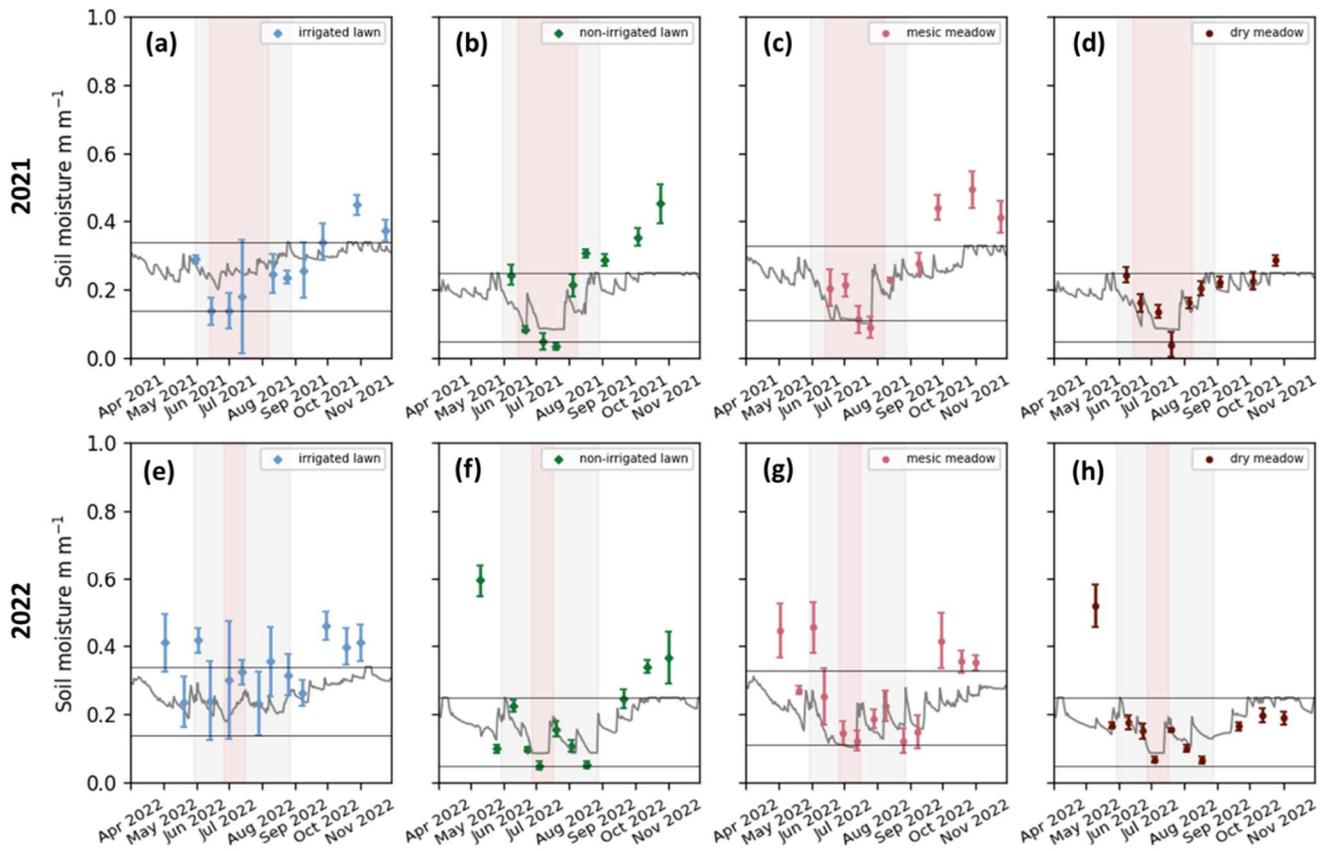

Figure S1. Dynamics of the measured TER (a) and calculated daily GPP (b), where irrigated lawn is KMP lawn, non-irrigated lawn is VKI lawn, mesic meadow is KMP meadow, and dry meadow is VKI meadow. Red rectangles indicate the drought periods according to the SPEI and light grey rectangles represent the summer season.

30

Figure S2. Annual dynamics of soil moisture at the four intensive sites. Grey continuous lines represent JSBACH simulations and diamonds and dots represent the mean of manual measurements with standard deviation bars. (a, e) Irrigated lawn = KMP lawn; (b, f) non-irrigated lawn = VKI lawn; (c, g) mesic meadow = KMP meadow; (d, h) dry meadow = VKI meadow. Red rectangles indicate the drought periods according to the SPEI and light grey rectangles represent the summer season.

35

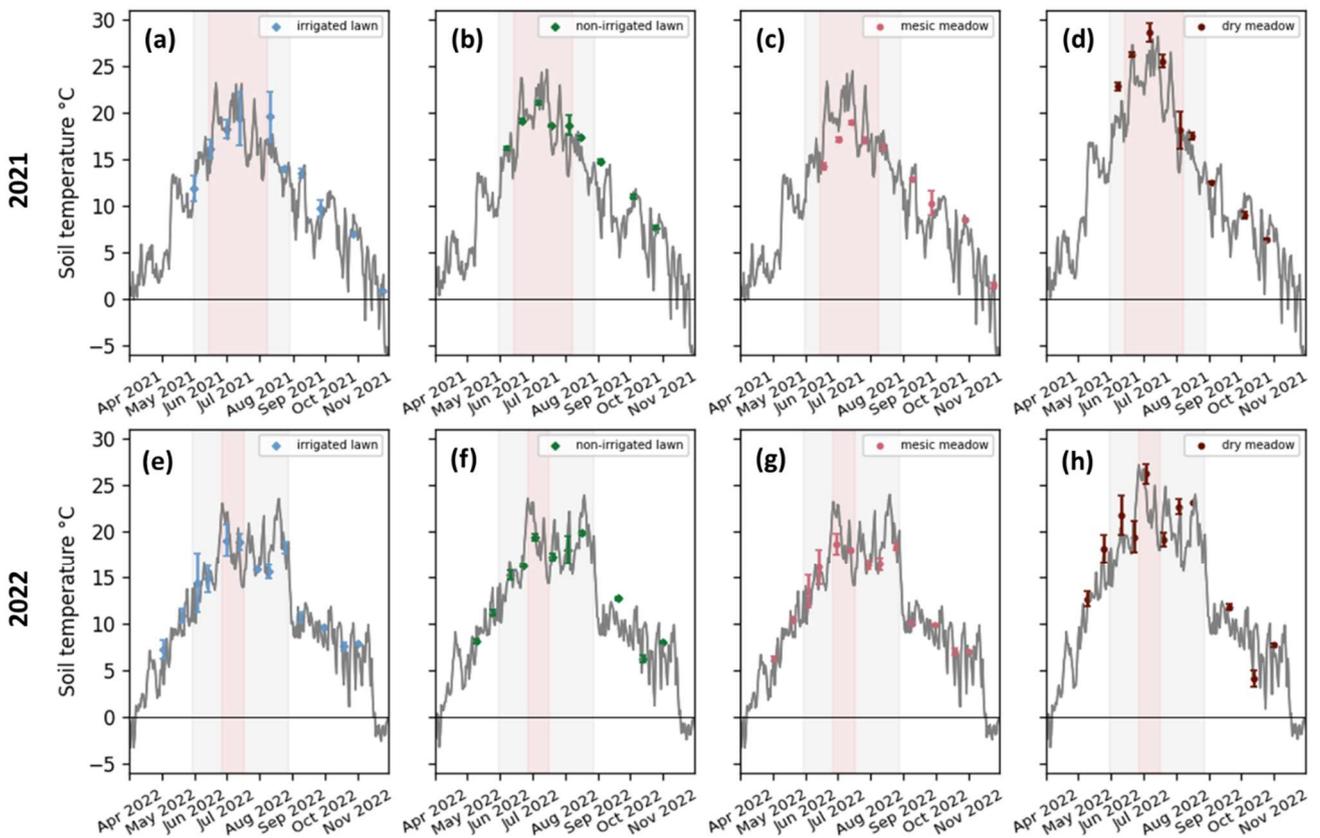

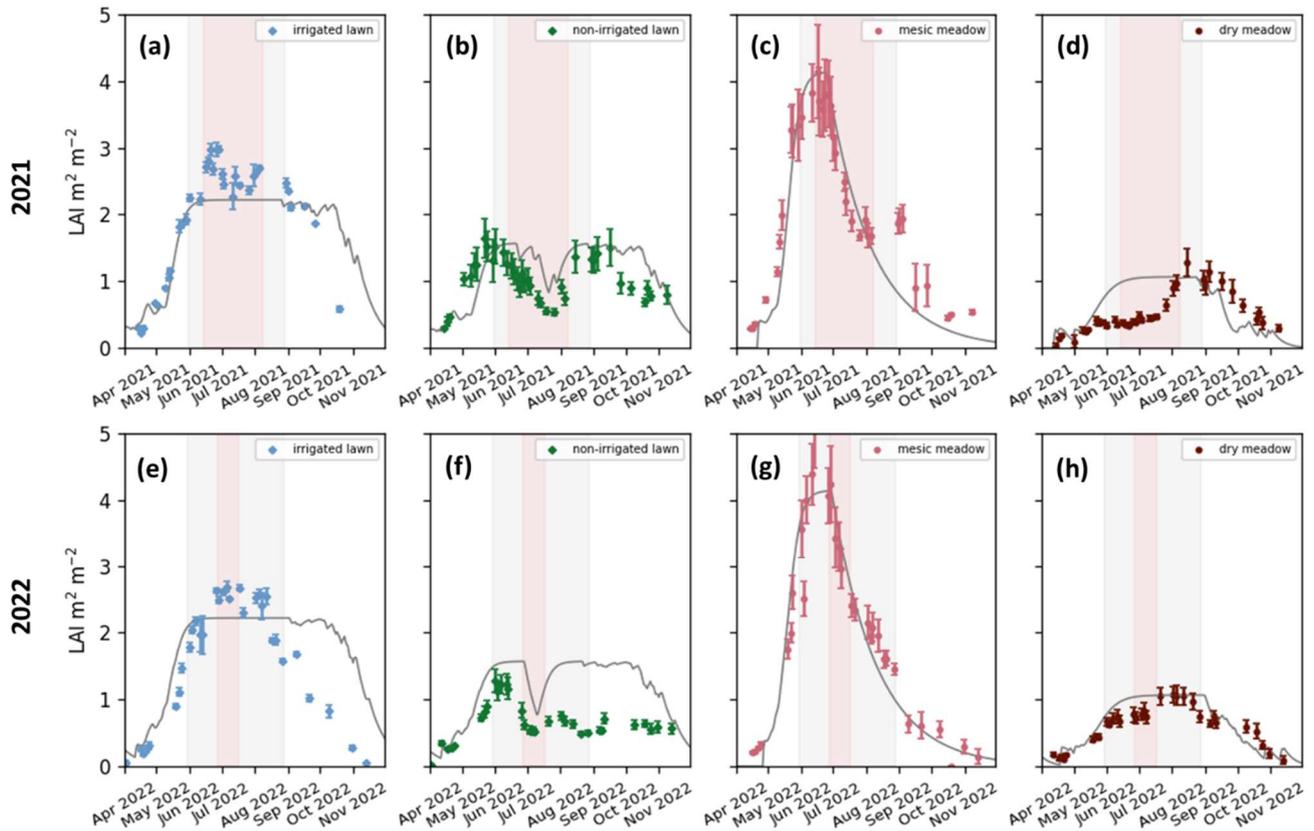

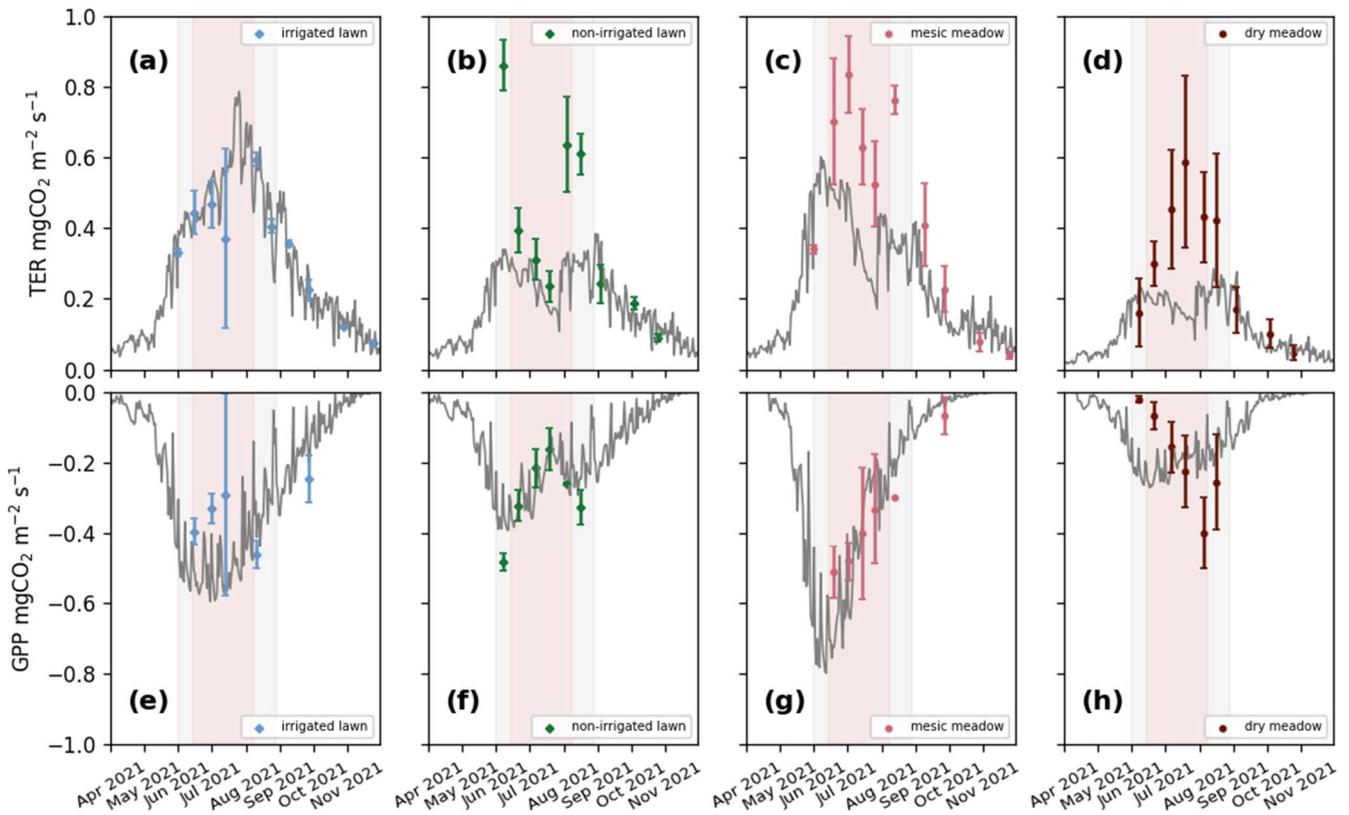

Figure S3. Annual dynamics of soil temperature at the four intensive sites. Grey continuous lines represent JSBACH simulations and diamonds and dots represent the mean of manual measurements with standard deviation bars. (a, e) Irrigated lawn = KMP lawn; (b, f) non-irrigated lawn = VKI lawn; (c, g) mesic meadow = KMP meadow; (d, h) dry meadow = VKI meadow. Red rectangles indicate the drought periods according to the SPEI and light grey rectangles represent the summer season.

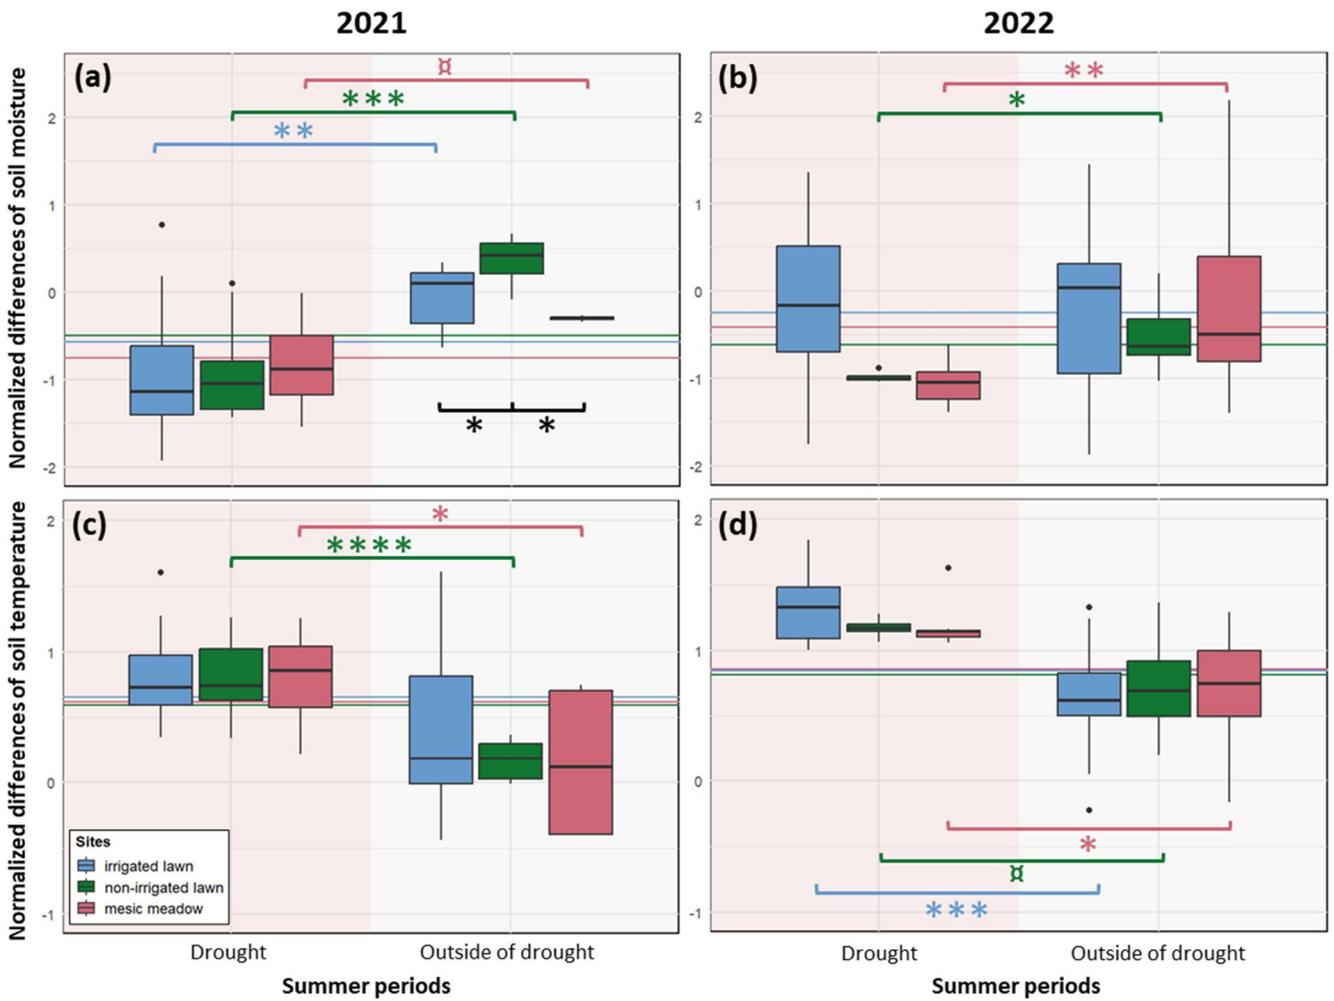

40

45 **Figure S4.** Annual dynamics of leaf area index (LAI) at the four intensive sites. Grey continuous lines represent JSBACH simulations and diamonds and dots represent the mean of manual measurements with standard deviation bars. (a, e) Irrigated lawn = KMP lawn; (b, f) non-irrigated lawn = VKI lawn; (c, g) mesic meadow = KMP meadow; (d, h) dry meadow = VKI meadow. Red rectangles indicate the drought periods according to the SPEI and light grey rectangles represent the summer season.

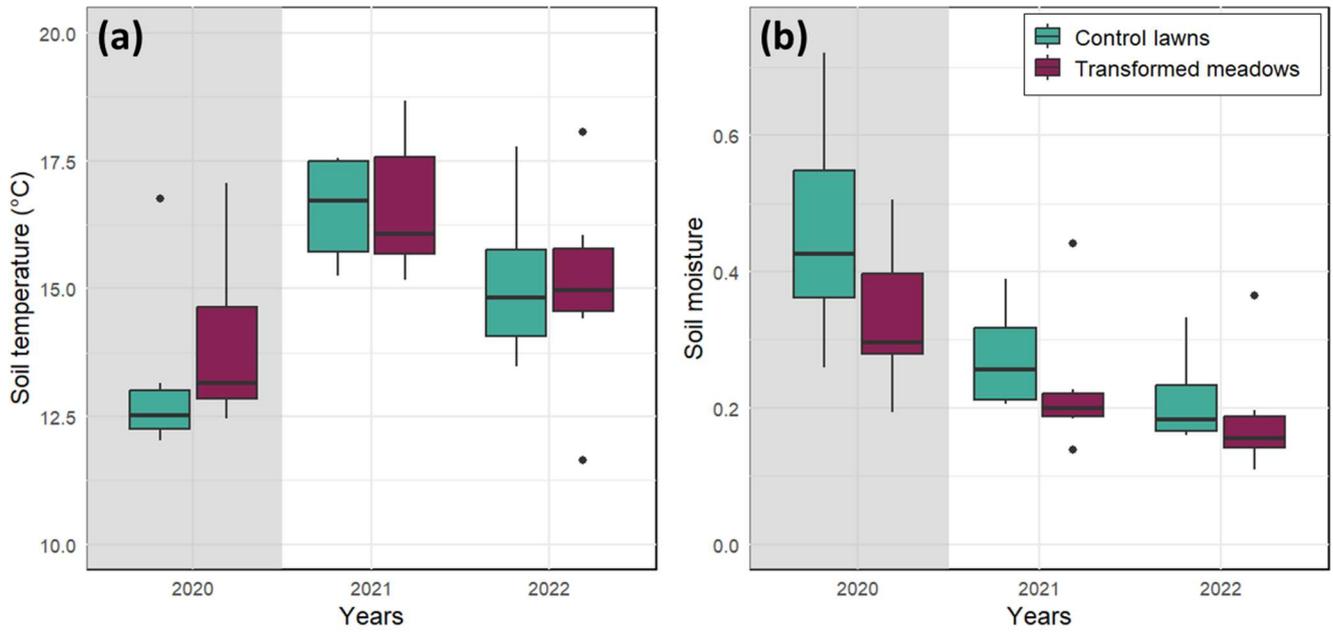

50 **Figure S5.** Seasonal dynamics of mean total ecosystem respiration (TER, abcd) and daily photosynthesis (GPP, efgh) in the four intensive sites in 2021. Grey continuous lines represent JSBACH simulations and diamonds and dots represent the mean of manual measurements with standard deviation bars. (a, e) Irrigated lawn = KMP lawn; (b, f) non-irrigated lawn = VKI lawn; (c, g) mesic meadow = KMP meadow; (d, h) dry meadow = VKI meadow. Red rectangles indicate the drought periods according to the SPEI and light grey rectangles represent the summer season.

55

Figure S6. The resistance indices of lawns and meadows to drought events in 2021 and 2022, where irrigated lawn is KMP lawn, non-irrigated lawn is VKI lawn, mesic meadow is KMP meadow, and dry meadow is VKI meadow. The values are normalized differences between the measured values during the drought and outside it between June to August in 2021 (first column) and in 2022 (second column), calculated for the soil moisture at 5 cm depth ((a) and (b)) and the soil temperature at 10 cm depth ((c) and (d)). Horizontal lines represent the summer average of each site. Droughts were defined in Fig. 2 (June 14th–August 8th, 2021 and June 27th–July 17th, 2022). (□ for p-value ≤ 0.10; * for p-value ≤ 0.05; ** for p-value ≤ 0.01; *** for p-value ≤ 0.001; and **** for a p-value ≤ 0.0001).

60

65

Figure S7. (a) soil temperature at 10 cm depth, and (b) soil moisture at 5 cm depth measured on the satellite sites before and after transformation, which happened in the end of 2020 only on the transformed lawns (\square for p-value ≤ 0.10 ; and * for p-value ≤ 0.05).
