

# **Re-review of “High-resolution spatial patterns and drivers of terrestrial ecosystem carbon dioxide, methane, and nitrous oxide fluxes in the tundra”**

## **General Comments**

I thank the authors' for their responses to my numerous comments and they have done a thorough job addressing my concerns. I particularly appreciate the change in scale of the partial dependence plots, as it makes it much easier to the relationships (or lack thereof) with drivers and compare between drivers. I also appreciate the additional discussion of over-fitting and the work to address it by removing an dissolved oxygen. I don't have any further comments to add and I look forward to seeing the published manuscript.
